

Access to a World of Choice

Hummingbird is an access switch that empowers people who are non-verbal with an alternative way of expressing themselves.

Introducing Hummingbird

A simple yet powerful device, Hummingbird is an innovative access switch that enables communication and interaction like never before. Specially designed for people who are non-verbal with severe physical disabilities, Hummingbird converts vocal cord vibrations into multiple outputs for easy use with computers, smart phones, tablets, environmental control units, augmentative and alternative communication (AAC) devices or other Bluetooth-enabled digital devices. This little pack has powerful potential.

Customizable

- Calibrate to user's hum
- Assign keystrokes
- Easy to adjust neckband

Easy to Use

- Magnetic clasp closure
- Easy to clean silicone
- Coloured light signals to indicate device status

Comfortable

- Lightweight power pack (2 AA batteries)
- Extension cable
